How much do marble tiles cost?

Understand the main factors that shape a marble tile quotation, from the selected stone to cutting and installation.

Why prices vary

Marble is a natural material, so price depends on the stone, its origin, colour, veining, grade, thickness and finish. Tile dimensions and the quantity required also matter. Two stones that look similar in a photograph may differ when viewed as full tiles or slabs.

Plan the full project

A useful budget considers more than the tile price. Allow for the measured area, planned cuts, breakage allowance, grout and installation materials, delivery, fabrication and fitting where required. Stairs, borders, patterns, bookmatching and unusual cuts can add work. Ask which items are included in each quotation so you can compare like with like.

Get an accurate quotation

Share the project location, room measurements, preferred stone and finish, drawings and intended timing. Confirm the final site measurements and quantities before ordering. Natural colour and veining vary, and stock and prices can change; ask the showroom to confirm current availability and the quotation for your specific selection.
